## THEMATIC

### Navigating new energy maps

*Bridging the new and emerging realities of global energy transitions*

Recent global energy crises have triggered a renewed focus on managing security while progressing energy transitions at an unprecedented speed and scale. The global ambition is clear, but visions and decarbonisation pathways differ. This thematic will navigate the new energy maps shaped by climate change, geopolitics, and new technologies, and the deeper societal transformation opportunities of globally inclusive energy transitions.

## THEMATIC

### Refuelling the future

*Leveraging a greater mix of energy sources, solutions and services*

Increasingly diverse energy mixes – from low carbon fuels to renewable power systems – are driving wider demand for critical materials, the development of global energy vectors and value chains, and new storage solutions. This thematic will explore the role of new fuels, new power systems and new storage challenges, including hydrogen and bio-based fuels, electricity generated in space and giga-batteries.

## THEMATIC

### Humanising energy

*Engaging people and communities in making global energy transitions happen*

The best way to make faster, fairer and more far reaching energy transitions happen is to involve more people and diverse communities. This thematic will convene visionary leaders and doers from across the world and from all levels of modern energy societies to share real-life experiences and stories about progressing successful energy transitions in their community, country and region.

## THEMATIC

### Pathfinding with the World Energy Trilemma

*Connecting energy security, affordability and sustainability*

For more than a decade, the World Energy Council's landmark World Energy Trilemma has been used to measure performance and guide national energy policy in over 120 countries by connecting the dots between security, affordability and environmental sustainability. This thematic will explore how each of these dimensions is evolving.

## THEMATIC

### Closing the gaps

*Enabling faster, fairer and more far-reaching energy transitions*

Energy transitions around the world are not moving fast enough to keep global warming below 1.5oC. Implementation gaps are widening on several fronts, including the flow of investment, development of infrastructure, structural inequalities, and climate change momentum. This thematic will explore the implications of policy and institutional innovation in accelerating decarbonisation with fairness and inclusion.
